Broadleaf App Testing Review – Fixes Required

To: Avensus Development Team

From: Broadleaf Team

Subject: Final Phase Fixes & Feature Enhancements

Priority Fixes & Enhancements

1. App Icon Update

- **Issue:** Current icon does not align with brand identity.
- **Action:** Update the app icon with the official Broadleaf icon.
- **Status:** Broadleaf team to provide final icon asset.

2. Separate Login & Signup Paths

- **Issue:** Onboarding flow for agents and regular users is not clearly separated.
- **Action:** Implement two distinct user journeys:
 - **Agent Signup/Login**
 - **Customer Signup/Login**
- **Status:** UI flow to be shared by Broadleaf team.

3. Startup Animation

- **Issue:** App lacks a branded launch experience.
- **Action:** Add a startup animation or splash screen that plays on each app launch.
- **Status:** Broadleaf will provide animation file or storyboard.

4. Privacy Policy & Support

- **Issue:** Sections are either empty or outdated.
- **Action:**
 - Update Privacy Policy and Help/Support pages with submitted content.
 - Include **User Agreement** for agents.

- **Status:** Content already submitted by Broadleaf.

5. Email Functionality & Authentication

- **Issue:**
 - No verification/confirmation email after signup.
 - Password reset not working.
 - Frequent “Invalid User” login errors.
- **Action:**
 - Integrate email verification after signup.
 - Ensure password reset instructions are sent via email.
 - Investigate and resolve login errors.

6. Cosmetic Updates & UI Alignment

- **Issue:** Visual elements and theme are inconsistent with the approved Figma file.
- **Action:**
 - Align app design (colors, fonts, icon placements, spacing) with Figma design system.
 - Ensure all screens reflect the approved UI direction.

7. Enhanced Search Functionality

- **Issue:** Property search is limited to town/city-level filters only.
- **Action:**
 - Expand search fields to include specific residential areas.
 - Examples: Salama Park, Chelstone, Olympia, Northmead, Rhodespark, etc.

8. In-App Notifications Center

- **Issue:** No interface to view historical or active app notifications.
- **Action:**
 - Add a **Notifications Page** where users can view all in-app messages and alerts.

Additional Suggestions

- **Favourites Section:** Allow users to mark and save favorite listings for quick access.
- **Contact Agent Features:** Ensure the “Contact Agent” button supports:
 - Direct phone call
 - WhatsApp integration
 - In-app inquiry form
- **Inquiry Tracking:** Admin and Agent dashboards should reflect new inquiries with date/time stamps.
- **User Profile Editing:** Allow users to add/update personal contact info, such as phone numbers.

- **Mobile Testing on Android Devices:** APK shared earlier is not opening on some devices — please test compatibility across a wider device range.

Next Steps

Once these items are resolved, we propose a **walkthrough demo** to test the full Web App, Mobile App, and Admin Dashboard. If successful, we will roll out an **internal test phase** with selected agents before moving into **Marketing Phase One**.
